Ching-Teng Yu (游鏡騰)

Course Design | Making Knowledge Clear | Experiential Teaching

I have many years of experience in environmental education, course development, and teaching. I am good at turning complex knowledge into learning experiences that are easy to understand and join, based on learning goals and the needs of each audience. I can bring together content research, course structure, and material and activity design. I keep improving through on-site teaching, observation, and feedback.

Featured Courses and Teaching Design

01 **Climate Resilience Course Development: Course Structure and Quality Across Courses** — View full case ↗

I took part in developing six climate resilience courses, bringing together an abstract topic, learning needs, and teamwork. I was in charge of the development structure, trial teaching, and keeping quality consistent across courses. I led the improvement of two courses and one new lesson plan, and revised them based on feedback.

02 **Food Carbon Detective: Making Knowledge Clear Through Game-Based Learning** — View full case ↗

I turned food carbon emissions and low-carbon eating into a game-based, hands-on learning experience, and kept improving it through real teaching and feedback. The mature version had 30 or more sessions and 800 or more participant visits from 2025 to 2026.

03 **Hunting Miracle: Simulation Game and Learning Mechanism Design** — View full case ↗

I turned hunting, limited resources, and environmental ethics into a simulation game. With probability, resource limits, and player decisions, learners see cooperation, role sharing, and resource management through feedback from the system. The teaching experience was improved over several versions.

Teaching Strengths and Ways to Work Together

Main fields	Environmental education | Sustainable development | Permaculture design
Course topics	Climate resilience | Sustainable eating | Water resources, and more
Course and teaching formats	School courses | Teacher training | Experiential workshops | Game-based learning | Course and material development
Audiences	Elementary school students | Teachers | Adults and community participants

Work and Teaching Experience

Global Environmental Enhancement Inc. Jun 2018 – Present

Environmental Education Teacher / On-site Supervisor

Based at a nature education center, I develop environmental and sustainability courses, design materials and teaching activities, teach on site, and work with the team. I adjust courses based on the audience and teaching feedback.

Freelance Instructor / Permaculture Design Consultant Jan 2020 – Present

I help schools and communities plan sustainability courses, teacher training, and hands-on activities. I offer course design, material development, and teaching services.

Early Experience

Environmental Education Specialist 2014 – 2015

Health Management Specialist 2015 – 2018

Education

National University of Tainan

2010 – 2014

Bachelor's degree, Department of Ecology and Environmental Resources

Environmental Education Personnel Certification, Ministry of Environment

iPAS Net-Zero Planning Manager (Intermediate and Beginner levels)

Permaculture Design Certificate (PDC)

Permaculture Teacher Training
